

Simplify your life online with carrier-class Wi-Fi

In today's increasingly connected homes, a fast, reliable Wi-Fi connection is no longer a luxury. We depend on Wi-Fi in so many ways: communicating with friends and family, sharing photos and videos, streaming movies and music, and interacting on social media. More and more, we also rely on Wi-Fi to connect a whole array of smart devices to manage mission-critical systems in our homes—such as smart locks, smart thermostats and smart security systems.

When it works the way it's supposed to, Wi-Fi is an amazing technology. When it doesn't—when we experience poor performance or can't connect at all—it has a big impact on our daily lives. For most of our devices, connecting over Wi-Fi is the only option. So when it's not working, it can be extremely frustrating.

As a result, many people are rethinking the logic of relying on consumer-grade Wi-Fi systems to manage something that's so important to their daily lives. Instead, they're looking to their service provider for a hassle-free Wi-Fi experience that makes their online lives better.

What is managed, carrier-grade Wi-Fi?

With managed, carrier-grade Wi-Fi, your service provider delivers the latest Wi-Fi technology and takes care of managing it within your home network. Your service provider offers a variety of Wi-Fi service levels, depending on your needs, including Mesh Wi-Fi solutions that use satellite units placed in different rooms to extend a strong Wi-Fi signal throughout your home.

What are the benefits of managed, carrier-grade Wi-Fi?

Managed, carrier-grade Wi-Fi has several advantages. First, it gives you superior performance, everywhere in your home. Unlike some of the consumer-grade Wi-Fi systems you buy at your local consumer electronics store, carrier-grade Wi-Fi is fast and highly reliable. No more dropped connections, no more dead spots—just reliable, high-speed Wi-Fi that works.

Second, it's worry free. Your service provider takes care of managing and updating your Wi-Fi network on an ongoing basis, so you don't have to. If you ever have an issue with your home network, your service provider's technical support team can access your Wi-Fi router remotely over the Internet and get you back up and running quickly.

Finally, managed Wi-Fi is much cheaper than the latest consumer-grade Wi-Fi systems. Many of these systems, especially those using Mesh Wi-Fi technology, can cost upwards of 500 dollars. Your service provider, on the other hand, can offer you a hassle-free managed home Wi-Fi service for a just a few dollars a month.

Contact your service provider

If you're ready to leave poor Wi-Fi performance and technical hassles behind and start enjoying a superior online experience, contact your service provider and order your managed, carrier-grade Wi-Fi service today.
